

tests/api.suite.yml

```
class_name: ApiTester
modules:
  enabled:
    - ApiHelper
    - Asserts
    - REST:
        depends: PhpBrowser
        url: http://localhost/Joomla-567-73/
#   - Db:
#       dsn: 'mysql:host=localhost;dbname=test_redcore'
#       user: 'root'
#       password: ''
#       populate: false
#       cleanup: false
#       reconnect: true
#   - SOAP:
#       depends: PhpBrowser
#       endpoint: http://localhost/tests/joomla-cms3/administrator/index.php?
# webserviceClient=administrator&webserviceVersion=1.0.0&option=contact&api=soap
#       schema: http://localhost/tests/joomla-cms3/media/redcore/webservices/administrator.contact.1.0.0.wsdl
```

tests/acceptance.suite.yml

```
# This is the Codeception Test Suite Configuration

# To use it rename this file to acceptance.suite.yml (it will be ignored by git)

# To run the test modify the following parameters according to your localhost details:
# - url
# - folder
# - db_user and db_pass

# suite for acceptance tests.
# perform tests in browser using the WebDriver or PhpBrowser.
# If you need both WebDriver and PHPBrowser tests - create a separate suite.

class_name: AcceptanceTester
modules:
  enabled:
    - JoomlaBrowser
    - AcceptanceHelper
  config:
    JoomlaBrowser:
      url: 'http://localhost/Joomla-567-73'      # the url that points to the joomla installation at /tests/system/joomla-cms
